2011-08 David Jolly The crime of Driving Under the Influence (DUI) begins and ends with the work of a well trained law enforcement officer. These officers observe driving behaviors of DUI drivers, respond to 911 calls and accidents, observe the physical appearances and mannerisms of DUI drivers, administer field sobriety tests to drivers, and ultimately must decide whether the driver is under the influence of alcohol or drugs. The complexity of these tasks under difficult conditions requires the law enforcement officer to make many decisions that will affect the individual being investigated and ultimately the case against this person. Therefore the decisions made by the officer must only be based on a thorough and well crafted investigation. This book details the DUI investigation process from the initial observations of driving, the first contact with the driver, and the administration of field sobriety tests. This book takes an objective view of the DUI investigation process and what law enforcement must do to properly and ethically proceed with each phase of the DUI investigation. This book is a must for every DUI law enforcement officer and any individual in the field of DUI, including prosecutors and defense attorneys.

2012-12-06 C. Manni C. Manni The focusing of general interest and of many disciplines on disaster medicine is an interesting and recent phenomenon in our society. Disasters have by now left the historical and philosophical sphere and finally entered the operational arena. Modern man, in other words, no longer accepts disasters in a passive and fatalistic manner, but claims to be able to control them like so many other forces of nature. The new approach is aimed at preventing, containing, and remedying the invariably tragic consequences of these events. The role of medicine in this context is of fundamental importance and is characterized by two main aspects: application of techniques of intervention appropriately and effectively, and collaboration with the general organization, assuming responsibility for the protection of health and the treatment of injuries. Following a period of more or less chaotic growth, during which sectionalism and empirical interests prevailed, and localized aspects of this new discipline underwent considerable development, a need is now felt to propose and realize a more comprehensive scientific approach. It has become necessary to identify and to rationally analyze the individual components of this branch of medicine. As in any analysis, the recognition of the "object" of the research is of fundamental importance: hence the title of this first round table: "Types and Events of Disaster.

2006-05 Greg Martin In the summer of 1949 fifteen smokejumpers parachuted into a remote Montana canyon called Mann Gulch. It started as a very small fire in rugged country but within two hours after landing, thirteen of these young men were caught in a raging inferno and were killed. They died bravely, together with their friends, and in the service of their country. Everyone was young and attractive, healthy and strong, enthusiastic and in love. They were bursting into the prime of their lives. There were no malcontents here. Everyone did their best but events overtook them. Until now the actual time line has never been connected to the people involved. Fire in Montana connects the lives of young smokejumpers who lived with a joy of life and expectations of shining futures, the forest rangers and volunteers who fought valiantly to rescue them, and their families, lovers, and friends who were forced to wait and pray, then face the devastating and heart wrenching loss.

2001-10-16 James Deetz The utterly absorbing real story of the lives of the Pilgrims, whose desires and foibles may be more recognizable to us than they first appear. Americans have been schooled to believe that their forefathers, the Pilgrims, were somber, dark-clad, pure-of-heart figures who conceived their country on the foundation of piety, hard work, and the desire to live simply and honestly. But the truth is far from the portrait painted by decades of historians. They wore brightly colored clothing, often drank heavily, believed in witches, had premarital sex and adulterous affairs, and committed petty and serious crimes against their neighbors in surprisingly high numbers. Beginning by debunking the numerous myths that surround the landing of the Mayflower and the first Thanksgiving, James Deetz and Patricia Scott Deetz lead us through court transcripts, wills, probate listings, and rare firsthand accounts, as well as archaeological finds, to reveal the true story of life in colonial America.
